

INSTAFROST

InstaFrost is a frost alert service that predicts ambient temperature and occurrence of frost from agroclimatic records captured by Instacrops stations: InstaWeather Standard / Plus and InstaSoil Temp / Plus.

WHAT DOES IT MEASURE?

This innovative service provides a prediction of the ambient temperature **12 hours in advance** with more than **90% of accuracy**.

BENEFITS

- Automatic SMS and email notifications according to the predicted temperature range.
- Estimated duration of the frost from beginning to end (HH: MM).
